## **Java – QAP 3 - Questions**

### **Questions:**

1. How many hours did it take you to complete this assessment? (Please keep try to keep track of how many hours you have spent working on each individual part of this assessment as best you can - an estimation is fine; we just want a rough idea.)

Close to 20 hours spread out over the week. The math section, and errors codes for proper package management were the biggest slowing factor.

2. What online resources you have used? (My lectures, YouTube, Stack overflow etc.)

Youtube videos were the biggest help, followed by Stack overflow, W3School and CodeGym.

3. Did you need to ask any of your friends in solving the problems. (If yes, please mention name of the friend. They must be amongst your class fellows.)

No this project was done solo.

4. Did you need to ask questions to any of your instructors? If so, how many questions did you ask (or how many help sessions did you require)?

No this project was done solo.

5. Rate (subjectively) the difficulty of each question from your own perspective, and whether you feel confident that you can solve a similar but different problem requiring some of the same techniques in the future now that you've completed this one.

6/10. I still find java coding in this style difficult, but the flow is becoming easier for me. I believe i rated the last similar project an 8/10, so overall this is improving.
